

About Us

Engytech Pty Ltd is an engineering and project management solution provider based in Australia and company has wealth of expertise to deliver sustainable value to our customer in terms of financial, safety and environmental solutions.

Engytech was founded in 2009 and now have extensive experience of iron mine operation, nonferrous mine operation, coal mine construction and production operation. In addition to provide engineering and construction services, we also provide professional financial cost control and management services.

ENGYTECH

MAKE YOUR **CONNECTION**

Conveyor Maintenance Services

We have the capacity to maintain, develop and provide the solutions to conveyor systems while providing ongoing maintenance with Australian Standards and, safety is always the priority. This will ensure you're up and running the best way with more productivity and safety.

Dealing with Confidence

Integrity is the foundation on which all our relationships are built - with clients, employees and suppliers.

To ensure you're dealing with confidence, Engytech is certified under the JAS-ANZ system for ISO 9001, 45001 and 14001.

Conveyor Services

We at Engytech bring world-class technology to the Australian mining industry. We have experience working with multinational mining companies in Australia. We have designed, built, and delivered cost and time friendly solutions to our customer requirements helping them thrive.

Routine Maintenance

Engytech can provide the routine maintenance and shutdown maintenance solutions to our clients.

Our engineering team carries great wealth of experience. We maintain world-class equipment and technologies.

Some special machines we work with are:

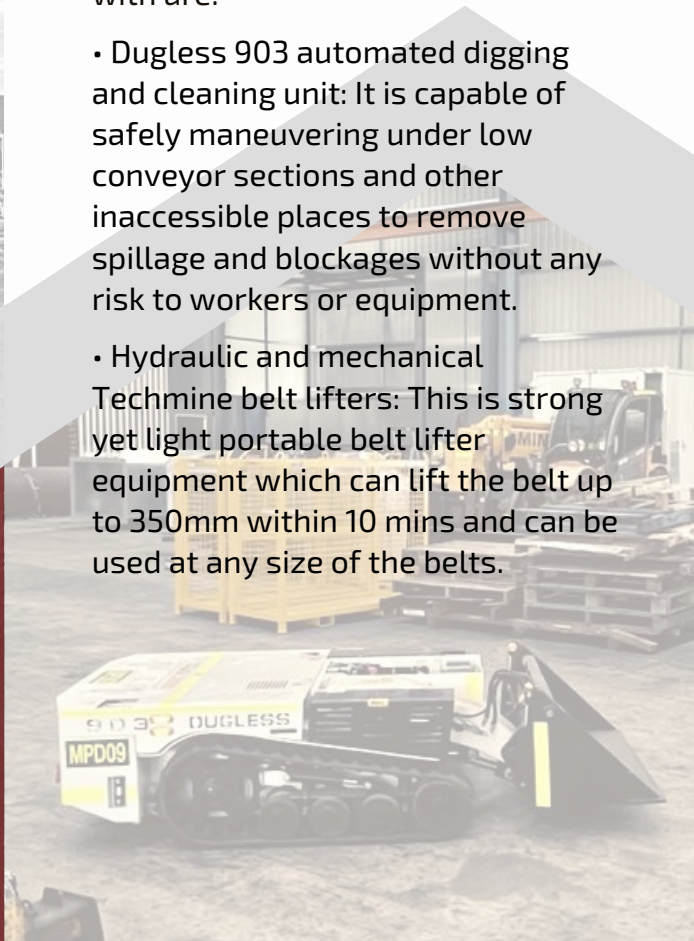

- Dugless 903 automated digging and cleaning unit: It is capable of safely maneuvering under low conveyor sections and other inaccessible places to remove spillage and blockages without any risk to workers or equipment.
- Hydraulic and mechanical Techmine belt lifters: This is strong yet light portable belt lifter equipment which can lift the belt up to 350mm within 10 mins and can be used at any size of the belts.

Transfer Chute Re-design and Modification

From the prior experience and data we gathered from last few years, we manage to re-design the chutes to minimise the damage while providing higher efficiency.

We maintain an effective communication with clients to identify their requirements and then customise the design.

Engytech is always specialised in delivering the best solutions to chute development and that has been proved by the designs we have done for our clients.

Preventive Maintenance

Conveyor system safety is our priority, and we always understand the equipment and key components.

Each conveyor has different technology and maintenance plan and we at Engytech have identified and analysed them and develop maintenance activities according to Australian Standards. You can have peace of mind as we are going to plan, communicate and conduct services, minimising the downtime.

When the system needs a schedule maintenance in the meantime, we have our own organised preventive maintenance schedules to make sure the system is running in full efficiency.

Belt Splicing

Engytech offer conveyor belt splicing and vulcanisation for all belt types including steel cord and rubber ply. Options include hot or cold vulcanising or mechanical fasteners.

We continually improve our conveyor belt splicing techniques by working with some multinational companies.

Our fully approved and trained technicians put this knowledge into action at your operation ensuring that the correct type of belt splice is used, undertaken safely and to the highest standard.

Onsite and Workshop Services

Engytech is an Australian based company, and we have our teams in Perth WA and Sydney NSW which can cover major mining areas in Australia.

We have an energetic, qualified team for maintenance and development of any conveyor belt system. We are using the best technology to bring you the best solutions.

Our team based on the mining site can provide onsite and workshop services from design and fabrication to fitting and maintenance. And we always want to make the workplace safe and easy with new technology.

HSEQ Certification

We're proud to announce that we have passed an in-depth set of assessments to achieve the honour of ISO certification for our management systems including:

ISO 45001 Occupational Health & Safety Management Systems

ISO 14001 Environmental Management Systems

ISO 9001 Quality Management Systems
